

Georgia State Crime Lab Drug

Library Listing – 1,940 spectra

This definitive forensic library is one of the most extensively used collections for the identification of drug substances. The Georgia State Crime Lab Drug Library contains FT-IR spectra of illegal and legal drugs as well as diluents, precursors and other drug-related compounds.

The library consists of spectra that were acquired by the Georgia Bureau of Investigation. Whenever possible the samples were secured as pure drug standards from the U.S. Drug Enforcement Administration (DEA), Applied Science Laboratories, U.S. Pharmacopoeial Conventions, Inc., and various pharmaceutical companies. For the majority of samples the material purity is 95% or better and in many cases is greater than 99%. Unless otherwise stated, the samples were prepared for spectral analysis using KBr pellets.
