

Sigma Steroids

Library Listing – 3,011 spectra

This library includes a wide variety of natural and synthetic steroids. It provides high-quality spectral data for medical and biochemical research and QC.

The Sigma Steroids Library contains 3,011 spectra. The spectra were acquired by Sigma and the United Kingdom Medical Research Council. All spectra were measured as KBr pellets. The steroid materials in the library are organized by skeletal type, and further by degree and type of substitution and unsaturation as shown in the table below:

Index Number Range	Skeletal Classification
1 – 104	Estrane
105 – 1074	Androstane
1075 – 1182	Etianic Acid
1183 – 2099	Pregnane
2100 – 2125	Cardane, Cardenolide
2126 – 2321	Cholane, Cholanic Acid
2322 – 2682	Cholestane, Spirostane
2683 – 2949	Ergostane, Lumistane, Campestone
2950 – 2976	Stigmastane, Poriferastane
2977 – 3006	Lupane, Ursane, Olene, etc.
3007 – 3011	Steroid Analogs

Sigma Steroids
