

Toronto Forensic

Library Listing – 3,549 spectra

This extensive library is one of the most widely-used collections of its kind for forensic scientists and investigators. The Toronto Forensic Library contains FT-IR spectra of illegal and legal drugs, drug precursors and reagents used to prepare them and other substances encountered in forensic analysis.

The library consists of 3,549 spectra that were measured at the Forensic Laboratories of the Canadian Department of Health and Welfare in Toronto. The spectra are distributed by Thermo Electron Corporation under license from Canadian Patent and Development Limited.

Similar compounds are grouped together. The four major divisions of substances are:

- organic (over 3,000 spectra)
- inorganic (over 180 spectra)
- natural and commercial products (over 120 spectra)

Compounds within the organic substances division are arranged by major functional groups present, but some types of compounds (for example, steroids, alkaloids and heterocyclics) are in separate groups. The organization of compounds within these groups is by skeleton and functionality.
